

THOTA GANESH

thotaganesh629@gmail.com

Mobile: +91 8919506909

Professional Summary:

- **Full Stack Python Developer** with 3 years of experience, mainly focused on backend development, APIs, and cloud-based applications.
- Skilled in **Python**, using **Flask** and **Django REST**, and experienced with **ReactJS** for building user interfaces.
- Comfortable working with **AWS** tools like **Lambda**, **EC2**, and **S3** to deploy secure and reliable apps.
- Good knowledge of **frontend technologies** like **HTML**, **CSS**, and **JavaScript**.
- Hands-on experience using **AI and ML tools**, such as **OpenAI API**, **Hugging Face**, **Scikit-learn**, and **Spacy**.
- Strong background in databases, including **MySQL**, **PostgreSQL**, and **MSSQL**.
- Helped build legal tech platforms that use AI for document automation and smart assistants.
- Worked on full-stack projects, from designing databases to building APIs and frontend interfaces.
- Built **ETL pipelines** to move and clean large amounts of data using **Python** and **Pandas**.
- Experienced in **Agile teams**, using tools like **Git**, **Postman**, **VS Code**, and **PyCharm**, and following **CI/CD** practices.

Tools and Technologies:

Category	Skills
Programming Languages	Python, React Js, JavaScript
Databases	MySQL, PostgreSQL, MSSQL
Web Technologies	HTML, CSS, RESTful APIs
Frameworks	Flask, Django REST Framework
AI/ML Tools	OpenAI API, Hugging Face, Scikit-learn, Spacy, Pandas, NumPy
Cloud Platforms	AWS (Lambda, EC2, S3)
ID/ Other Tools	VS Code, PyCharm, Git, Postman
Development Concepts	Microservices, Data Processing, AI Integration, ETL Pipelines

Work Experience:

- Currently working as a **Software Engineer** at **Techoptima Pvt Ltd**, Hyderabad (June 2022 – Present)

Project Name: OptLegal

Project Description:

A comprehensive legal tech platform developed for lawyers, paralegals, and legal professionals to streamline the creation of accurate and legally compliant case drafts and documents. The platform offers over 300 customizable templates including wills, deeds, NDAs, and more. It also features an AI-powered assistant (**Amigo**) using a fine-tuned **LLM** model developed in-house to automate document drafting.

Roles and Responsibilities:

- Helped build web apps using **Flask**, **Django REST Framework**, and **ReactJS**, following team instructions and best practices.
- Helped create **RESTful APIs** for things like user input, document creation, and using **AI tools**.
- Worked with a **language model** (from **OpenAI** and **Hugging Face**) to help users write documents using plain English.
- Made easy-to-use and reusable parts of the website with **ReactJS** and made sure the design worked well on phones and computers.
- Got hands-on experience with **AWS** tools like **S3** (for saving files) and **EC2** (for running the app online).
- Joined team meetings and used **JIRA** to keep track of tasks and plan work.
- Used **GitHub** to save code, work on branches, and check teammates' changes.
- Helped write and update documents like API guides and setup steps.
- Followed basic **security** and **data privacy** rules, especially for working with legal documents.

Project Name: Data Migration System

Project Description:

A backend system designed to automate the secure migration of large and complex datasets across heterogeneous database systems. This included the normalization, transformation, and validation of data using ETL pipelines to support analytics and operational use cases.

Roles and Responsibilities:

- Helped build end-to-end data pipelines using **Python**, **Pandas**, and **MSSQL** to move data from old systems to new ones.
- Created reusable code to handle files like **CSV** and other common data formats.
- Built simple web services using **Flask** and **REST APIs** to start and monitor data transfers.
- Added basic error checks to catch and fix data problems during migration, improving accuracy.
- Wrote code to handle big files in smaller chunks, helping save memory and speed up the process.
- Set up **logging** and tracking for each batch of data to make sure everything could be traced and reviewed.
- Talked with business teams to understand and define how data should be cleaned and organized.
- Used **JIRA** to track tasks, bugs, and plan work during team sprints.
- Used **GitHub** to manage code, work in branches, and review teammates' changes.
- Helped write guides on how the data pipeline works, how to fix errors, and how to set everything up.
